

HUMA GRO® GOLDEN GRO™ Produces More Premium Quality Cantaloupes

Field Report

Summary:

A field trial was conducted on Gold Mark variety of cantaloupe to compare HUMA GRO® GOLDEN GRO™ to a conventional fertilizer program. The purpose was to get more uniform, high quality fruit to sell for a higher profit.

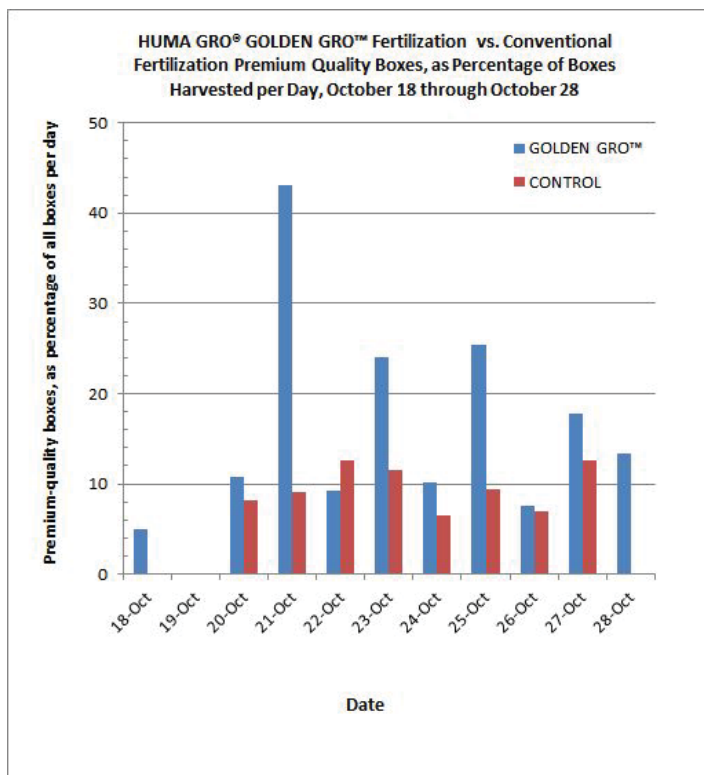

Description

A field trial was conducted on Gold Mark variety of cantaloupe to compare HUMA GRO® GOLDEN GRO™ to a conventional fertilizer program (control). All things were equal on the trial: The same Gold Mark variety of cantaloupe was used. Both crops were rotated after a bean crop. All other applications were the same except the addition of GOLDEN GRO™ to the test block.

Results

The plants treated with GOLDEN GRO™ were stronger and the fruit had better quality including firmness, inside color, netting, and uniformity of fruit. This improved quality from the GOLDEN GRO™ application resulted in an **extended harvest**, **increased yield**, and **higher prices**.

The grower was able to pick **138.6 boxes** more per acre on the HUMA GRO® GOLDEN GRO™ cantaloupe fields, earning **\$415.80 per acre** additional net income.

From the beginning to the end of harvest, the GOLDEN GRO™ treated melons had more premium quality fruit available to harvest.

The GOLDEN GRO™ treated melons had more premium quality fruit and more quantity.

Conclusion

The addition of HUMA GRO® GOLDEN GRO™ produced premium quality cantaloupe that resulted in 138.6 boxes more per acre and in a net gain of \$415.80 more per acre than the control.
