

PROMAX[®] on Onions

Field Report

U.S. Grower (Winter 2015/2016)

Field 1

December 12, 2015

A 70-acre field of onions was showing signs of stress due to nematodes. With Vydate[®] in short supply and the grower being newly introduced to Huma Gro[®] PROMAX[®], the two products were combined.

Products were applied through solid set sprinkler irrigation with a 24-hour set of irrigation. PROMAX[®]/Vydate[®] were applied in hours 22 and 23.

Rate: PROMAX[®] at 1 gallon per acre. Vydate[®] at 50% rate.

Result: Grower saw a significant crop response by day 5.

Field 2

December 30, 2015

A 75-acre field of onions.
100% Huma Gro[®] PROMAX[®]
Same application method as first application on 70-acre field.

RATE: 1 gallon PROMAX[®] per acre.

Result: Grower called at day 4 and said his plants are vibrant and green.
