

HUMA BURST® GREENS

GUARANTEED ANALYSIS

Total Humic Acid (HA) and Fulvic Acid (FA) 60.00%-70.00%
(Analysis using the Colorimetric Test Method)

Derived from: Oxidized Leonardite

Other Test Methods:

Total Humic Acids (HA) 40.00%-45.00%
(Analysis using the HPTA or ISO 19822 Test Method)

Total Humic Acids (HA) 35.00%-40.00%
(Analysis using the CDFA Test Method)

DIRECTIONS FOR USE

- Designed to be applied to the soil.
- HUMA BURST® GREENS adds naturally occurring materials containing humic acids to soil that may enhance plant micronutrient availability and uptake and should be applied when soil analysis identifies the need and proper rate of application for this product.
- Best results will be obtained when application is concentrated in the active root zone or when applied directly to the soil followed by a shallow cultivation.
- Can be applied in combination with compatible plant growth regulators, pesticides, or other granular fertilizers.
- Apply HUMA BURST® GREENS by broadcast whether through air or ground machine.
- HUMA BURST® GREENS can be applied to all soil types for ornamentals, lawns, gardens and landscapes.
- Avoid spreading during high humidity, or mixing with high moisture fertilizers such as urea.
- Application timing, intervals and rates may vary according to individual crop requirement, stage of development, available nutrient levels in the soil, and overall nutritional status of the crop.
- Applications can be made as often as every 30 days as needed.
- Soil moisture is required for maximum bioactivity. If soil is dry, moisture should be provided by irrigation.
- Consult your local HUMA GRO® representative or other agricultural specialist for crop-specific recommendations.

This product is intended as a supplement to a regular fertilization program and will not, by itself, provide all the nutrients normally required by agricultural crops.
