

HUMA BURST[®] MICROMATE

GUARANTEED ANALYSIS

Total Humic Acid (HA) and Fulvic Acid (FA) 60.00%-70.00%
(Analysis using the Colorimetric Test Method)

Derived from: Micronized Oxidized Leonardite and Suspension Agents

Other Test Methods:

Total Humic Acids (HA) 40.00%-45.00%
(Analysis using the HPTA or ISO 19822 Test Method)

Total Humic Acids (HA) 35.00%-40.00%
(Analysis using the CDFA Test Method)

DIRECTIONS FOR USE

- Designed to be put into suspension and applied to the soil.
- HUMA BURST[®] MICROMATE adds naturally occurring materials containing humic acids to soil that may enhance plant micronutrient availability and uptake and should be applied when soil analysis identifies the need and proper rate of application for this product.
- Best results will be obtained when application is concentrated in the active root zone or when applied directly to the soil followed by a shallow cultivation.
- Can be applied in combination with compatible plant growth regulators, pesticides, or other suspension fertilizers.
- Apply HUMA BURST[®] MICROMATE by broadcast whether through fertigation or spray machine.
- HUMA BURST[®] MICROMATE can be applied to all soil types for ornamentals, lawns, gardens and landscapes.
- Application timing, intervals and rates may vary according to individual crop requirement, stage of development, available nutrient levels in the soil, and overall nutritional status of the crop.
- Applications can be made as often as every 30 days as needed.
- Soil moisture is required for maximum bioactivity. If soil is dry, moisture should be provided by irrigation.
- Consult your local HUMA GRO[®] representative or other agricultural specialist for crop-specific recommendations.

This product is intended as a supplement to a regular fertilization program and will not, by itself, provide all the nutrients normally required by agricultural crops.
